Steam Locomotive - build your own moving model by UGears
Their DIY linear Fresnel reflector array collects and transforms solar energy into steam up to 250Âº Celcius. Solar concentrators work by focusing the sun’s rays on a water pipe to generate steam. The Solar OSE uses Arduino-controlled motors to pivot the array of mirror strips at the base of the structure to track the sun, automatically maintaining optimal solar concentration on the pipe.

This DIY Solar-Powered Steam Generator Can Reach 250
To make a steam engine out of a soda can, you’ll need an empty soda can, pliers, a tea light, an 8-inch piece of copper tubing, and a bowl of water. The engine works by using heat from a candle to evaporate water, which creates steam to form jets that propel the engine.

How to Make a Steam Engine (with Pictures) - wikiHow
