Food engineering is a multidisciplinary field which combines microbiology, applied physical sciences, chemistry and engineering for food and related industries. Food engineering includes, but is not limited to, the application of agricultural engineering, mechanical engineering and chemical engineering principles to food materials. Food engineers provide the technological knowledge transfer ...

In mathematics, physics, and engineering, a Euclidean vector (sometimes called a geometric or spatial vector, or "as here" simply a vector) is a geometric object that has magnitude (or length) and direction. Vectors can be added to other vectors according to vector algebra. A Euclidean vector is frequently represented by a line segment with a definite direction, or graphically as an arrow ...

Dane Wigington GeoengineeringWatch.org. Geoengineering Watch has again captured radar animations that prove geoengineering operations are manufacturing "winter weather" over specific regions. The increasingly desperate and destructive operations being carried out by the weather-makers is far beyond alarming. Engineering "winter weather" events are one of the primary missions of the ...

The horrific environmental and climate decimation being created by climate engineering are far beyond catastrophic. Though there are countless forms of anthropogenic damage to the planet and the climate system, global geoengineering operations are mathematically the most destructive of all. If public apathy regarding the climate engineering assault remains, if academia continues to lie about ...
