}A normative theory of values in science should not discourage the influence of non-empirical decision vectors at the individual level in determining a scientist's choice of one theory over another. }For an individual scientist, social empiricism gives only one guideline. A scientist should work with empirically successful theories.

Science and Values. Two major theses in this area are (1) that scientific inquiry, rather than being a simple matter of evidence and logic or rule-governed inference, requires a variety of value judgments, and (2) that social (ethical, prudential, political, etc.) values play some role in scientific inquiry.
