### **Silane Coupling Agents - Struktol**

Silane is an inorganic compound with chemical formula, Si H 4, making it a group 14 hydride. It is a colourless, pyrophoric gas with a sharp, repulsive smell, somewhat similar to that of acetic acid. Silane is of practical interest as a precursor to elemental silicon. "Silanes" refers to many compounds with four substituents on silicon, including an organosilicon compound.

Seeing old friends in a new light: A divergent synthesis of quinine and quinidine (see structures) was designed on the basis of a symmetrical and nonstereogenic intermediate, conceptually different from the stereodefined piperidine precursors used in past syntheses. Complementary late-stage local-desymmetrization reactions were developed to access the two targets.

Molybdenum disulfide (MoS<sub>2</sub>) thin-film transistors were fabricated with ion gel gate dielectrics. These thin-film

transistors exhibited excellent band transport with a low threshold voltage ( $<1$  V), high mobility ( $12.5 \text{ cm}^2 / (\text{V}\cdot\text{s})$ ) and a high on/off current ratio ( $10^5$ ). Furthermore, the MoS<sub>2</sub> transistors exhibited remarkably high mechanical flexibility, and no degradation in the electrical ...

1. Introduction. Zinc oxide, with its unique physical and chemical properties, such as high chemical stability, high electrochemical coupling coefficient, broad range of radiation absorption and high photostability, is a multifunctional material [1,2]. In materials science, zinc oxide is classified as a semiconductor in group II-VI, whose covalence is on the boundary between ionic and covalent ...
